TECHNEURA CONSULTING · INTEGRATION SPECIFICATION

LeaderPrism × HRIS KPI Management

What LeaderPrism provides, how the HRIS handles the rest, and the full feature specification for the HRIS KPI module

Document	Integration & Feature Specification
Version	1.0
Date	10 November 2026
Prepared by	TechNeura Consulting
Systems	LeaderPrism (360° Leadership Assessment Platform), HRIS (KPI module)
Status	Draft for review

How to read this document. Part A lists every output LeaderPrism can provide to the HRIS, and what LeaderPrism must add before it can provide them. Part B explains how the HRIS uses those outputs and handles everything else during a review cycle. Part C is the detailed feature specification for the HRIS KPI module, one chapter per module. Each feature has a priority: MVP needed for the first live review cycle, PHASE 2 next release, PHASE 3 later.

Contents

1. Executive summary

15. Open questions and assumptions
Appendix: Glossary

1. Executive summary

LeaderPrism and the HRIS answer two different questions about an employee:

- **HRIS KPI module: *what* did the employee deliver?** Business results against agreed targets, such as revenue, delivery, quality and attendance.
- **LeaderPrism: *how* does the employee work and lead, and how far can they grow?** Competency ratings, 360° feedback, personality profile and leadership readiness.

A review of LeaderPrism's codebase shows that it contains **no KPI functionality**: no KPIs, targets, actual values, goals, weightages or performance cycles. Almost all of the KPI module must therefore be built in the HRIS. LeaderPrism already covers the **behavioural and leadership half** of a performance review well. The HRIS should consume those results rather than rebuild them.

> **Recommended model**
> The HRIS owns KPIs, cycles, scoring, approvals and reports. LeaderPrism runs the competency and 360° assessments for the same cycle. It sends the results back so they become the **leadership component of the employee scorecard** (for example 30% of the final score), and they also feed development plans and succession. The HRIS sends its **final calibrated performance score** back to LeaderPrism, where it becomes the performance axis of the 9-box talent grid.

Before any data can flow, LeaderPrism needs a set of integration features: system-to-system authentication, HRIS employee ID mapping, user sync, results APIs, webhooks and single sign-on. These are listed in Section 7.

2. Scope and guiding principles

Principle	Meaning in practice
One owner per data item	The HRIS is the source of truth for employees, departments, reporting lines, designations, KPIs and final ratings. LeaderPrism is the source of truth for competency, 360°, personality and readiness results.
Performance ≠ potential	Only results that describe behaviour during the review period, namely competency ratings (O-1) and 360° scores (O-3), may count towards the performance score. Readiness (O-4) and personality (O-7) describe potential and traits. They are used only for development and succession.
Anonymity is preserved	360° feedback reaches the HRIS only as grouped averages that meet the minimum-rater threshold. Individual rater identities and answers never leave LeaderPrism.
Humans decide	Automatic scores and AI suggestions are inputs. A manager and HR must confirm every rating, and AI output stays editable and must be verified before it is used in an employment decision.
History is immutable	Finalised evaluations, and the KPI definitions and templates they used, are versioned and locked. Later changes never alter past results.
Tenant isolation	Every record belongs to one organisation. Integration credentials are issued per organisation and can only read or write that organisation's data.

Part A: Outputs from LeaderPrism

3. What LeaderPrism is (and is not)

LeaderPrism is a multi-tenant 360° leadership assessment platform with four assessment types:

Module	What it measures	Key result
UC1: 360° Feedback	Ratings of an employee's competencies by self, supervisor, peers, direct reports and stakeholders, collected through anonymous email links with a minimum-rater threshold	Average per competency, per rater group; gap against self-rating
UC2: Competency Assessment	Self and manager ratings on a 4-level competency scale, with evidence and development comments	Level per competency; self vs manager gap
UC3: Personality (Big Five)	Openness, conscientiousness, extraversion, agreeableness, emotional stability	T-score and percentile per factor
UC4: Leadership Readiness	Fit to a target role profile, using competency, 360°, situational judgement, learning agility and personality fit	Readiness rating, composite score, 9-box placement

It also includes a configurable **competency framework** (domains → competencies → 4 level descriptions → behaviour statements), **role profiles**, a **succession module** (key roles, successors, bench, org chart) and **PDF reports**.

> **What LeaderPrism does not do**
> It has no KPIs, targets, measured actuals, goals, weightages, recurring performance cycles, multi-level approval workflow, PIPs, development plans, Excel export, audit log or AI features. These all belong in the HRIS (Part C).

4. Output catalogue

All of the outputs below are **already calculated and stored** in LeaderPrism. They need an external API to be reachable (Section 7).

O-1 · Competency ratings (UC2) MVP

Contents	For each employee and competency: **self level** and **manager level** on a 1–4 scale (1 Developing … 4 Role model), evidence text, development comment, submission dates, and the competency's domain (People, Conceptual, Behavioural, Technical).
Granularity	Per employee × competency × assessment (one assessment per review cycle)
Available when	When the manager submits their rating, and final when the assessment closes
HRIS uses it in	C8 Manager Evaluation (behavioural competencies); C9 Scoring (leadership KPIs with data source "LeaderPrism"); C14 Reports (self vs manager)

O-2 · Competency gap analysis

MVP

Contents	(a) Self vs manager gap per competency. (b) Actual vs **required level** for the employee's role profile, with each competency's weight in that role. (c) The largest gaps, ranked.
HRIS uses it in	C13 Development (skill gaps → development plan goals); C12 PIP (behavioural improvement areas); C15 AI skill-gap analysis and development plan; C3 target values for leadership KPIs

O-3 · 360° feedback results (UC1)

MVP

Contents	Per competency: overall average, and average and rater count **per rater group** (supervisor, peer, direct report, stakeholder), self score and gap against self. Overall rating. Themed development comments (grouped, no rater identity).
Scale	Configurable per assessment (the rating scale is stored in the assessment configuration). The HRIS must normalise using the `scaleMax` field in the payload.
Privacy	Released only for groups that meet the minimum-rater threshold. No individual answers or rater identities.
HRIS uses it in	C10 Feedback (the 180/360 feature is delivered by LeaderPrism); C8 Manager Evaluation (shown as context); C9 Scoring (optional "360° score" leadership KPI)

Implementation note: the current 360 aggregation calculates the overall average across all ratings, including the self-rating. The integration export should provide an **"others" average that excludes self**, so that self-rating cannot inflate a score used in a performance evaluation.

O-4 · Leadership readiness (UC4)

PHASE 2

Contents	Readiness rating for a target role: **Ready now** (composite ≥ 75), **1–2 years** (≥ 60), **Developing** (≥ 45), **Not yet ready**. Composite score 0–100 and its components: competency 30%, 360° 25%, situational judgement 25%, learning agility 15%, personality fit 5%. Target role profile.
HRIS uses it in	C13 Career growth (promotion readiness, career planning). **Never** used in the performance score.

O-5 · 9-box placement

PHASE 2

Contents	Performance axis (High / Medium / Low) and potential axis (High / Medium / Low), whether the performance value was overridden by HR, the override note and who set it. Potential is derived from learning agility (50%), personality fit (30%) and situational judgement (20%), using thresholds of ≥ 70 for High and ≥ 40 for Medium.
HRIS uses it in	C11 Calibration / talent review; C13 Succession; C14 HR reports

O-6 · Succession data

PHASE 2

Contents	Key roles, the nominated successors for each key role with readiness, bench strength, and roles with no ready successor.
HRIS uses it in	C13 "Connect goals to succession planning"; the employee profile shows "Successor for: …"

O-7 · Personality profile (UC3)

PHASE 3

Contents	Big Five factor T-scores and percentiles.
HRIS uses it in	C13 and C15 coaching context only (e.g. the AI development-plan assistant). Restricted to HR and the employee. **Never** used in scoring, ranking or employment decisions.

O-8 · PDF reports

MVP

Contents	Individual 360°, competency, personality and readiness reports, plus an organisation summary, delivered as a secure download link per report.
HRIS uses it in	Attached to the employee's evaluation record (C7, C8) and shown in the employee profile. Visibility follows HRIS permissions.

O-9 · Competency framework & role profiles

MVP

Contents	Competency domains, competencies, the four level descriptions with indicators, and behaviour statements. Role profiles with required competencies, minimum levels and weights.
HRIS uses it in	C2/C3: leadership KPIs are created from LeaderPrism competencies (no need to rewrite the definitions); the required level becomes the KPI target value.

Output summary

Output	Performance score?	Development	Succession	Who in the HRIS may see it
O-1 Competency ratings	✓ Yes	✓	✓	Employee, line manager, HR
O-2 Competency gaps	No	✓	✓	Employee, line manager, HR
O-3 360° results	✓ Optional	✓	✓	Employee, line manager, HR
O-4 Readiness	**No**	✓	✓	HR, senior management
O-5 9-box	**No**	—	✓	HR, senior management
O-6 Succession	**No**	—	✓	HR, senior management
O-7 Personality	**Never**	✓ Coaching	—	Employee, HR
O-8 PDF reports	—	✓	✓	As per report type
O-9 Framework	Defines leadership KPIs	✓	✓	HR administrators

5. Inputs LeaderPrism receives from the HRIS

Input	Contents	Purpose in LeaderPrism
I-A · Employee sync MVP	HRIS employee ID, name, email, department ID, manager's employee ID, designation ID and title, employment status (active, probation, left), joining date, preferred language	Creates and updates participants and the reporting hierarchy, and deactivates leavers
I-B · Department sync MVP	Department ID, name, parent department ID, active flag	Department structure for analytics and filters
I-C · Designation sync PHASE 2	Designation ID, title, grade/level	Links employees to role profiles automatically
I-D · Assessment request MVP	HRIS cycle ID, assessment type(s), start/end dates, participant employee IDs, whether to include self-assessment, competency set or role profile	Creates and launches a LeaderPrism assessment aligned to the HRIS cycle
I-E · Final performance score PHASE 2	Employee ID, cycle ID, final calibrated score (0–100), rating band, finalisation date	Sets the 9-box performance axis, replacing the current 360-derived default

6. Data contracts (sample payloads)

These are proposed shapes that show the agreed field names. Final endpoints will be published in LeaderPrism's Swagger documentation under `/api/v1/integrations/hris/…`.

Results for one employee and cycle (LeaderPrism → HRIS)

```
GET /api/v1/integrations/hris/results?cycleRef=2027-H1&employeeRef=EMP-00421
{
  "employeeRef": "EMP-00421",

30T18:00:00Z" }
```

Proposed events: `assessment.launched`, `assessment.participant_completed`, `assessment.closed`, `results.ready`, `readiness.computed`, `report.ready`.

Final score (HRIS → LeaderPrism)

```
PUT /api/v1/integrations/hris/performance-scores
{ "cycleRef": "2027-H1",
  "scores": [ { "employeeRef": "EMP-00421", "finalScore": 82.5, "ratingBand": "Exceeds",
                "finalisedAt": "2027-07-20T10:00:00Z" } ] }
```

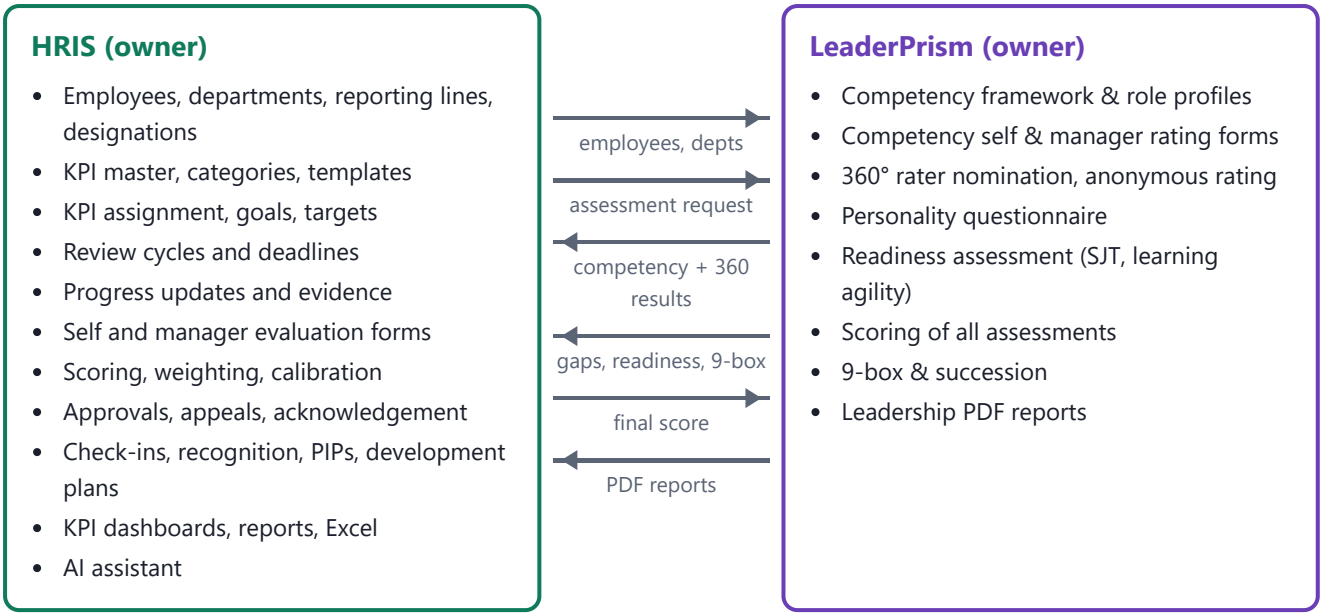

7. Prerequisites to build in LeaderPrism

These items are missing from LeaderPrism today. They must be delivered before, or alongside, the HRIS work.

#	Item	Current state	Required	Priority
P-1	**System-to-system authentication**	Only user logins (JWT)	Per-organisation API keys or OAuth2 client-credentials with scopes (read results, write employees, write scores); rotation and revocation	MVP
P-2	**External reference IDs**	Users matched by email only	`externalRef` on organisation, user, department, designation and assessment (cycle reference), unique per organisation	MVP
P-3	**Employee & department sync API**	Users and departments are created manually	Bulk upsert endpoints (I-A, I-B); leavers deactivated rather than deleted; org screens become read-only for HRIS-managed fields	MVP
P-4	**Assessment creation API**	Assessments created only in the UI	Endpoint for I-D that creates, adds participants and launches	MVP
P-5	**Results export API**	Score endpoints are per participant and need a user login	Bulk results by cycle and by employee (Section 6), with the "others" 360 average that excludes self	MVP
P-6	**Webhooks**	None	Signed event delivery with retries (via the existing BullMQ queue) and a delivery log	MVP
P-7	**Single sign-on**	Separate password login	OIDC/SAML, or a signed hand-off token from the HRIS, so employees open LeaderPrism forms without a second password	MVP
P-8	**Inbound performance score**	9-box performance comes from 360 or a manual H/M/L override	Store I-E per cycle and make it the default performance axis (manual override still possible)	PHASE 2
P-9	**Audit log**	None	Record who changed, overrode or exported data, including integration calls	PHASE 2
P-10	**Scheduler**	Reminder days are configured but not automated	Scheduled reminders and nightly reconciliation sync	PHASE 2

Part B: How the HRIS handles the rest

8. System responsibilities

9. End-to-end review cycle

The example is a half-yearly review (H1) for a department that uses both business and leadership KPIs.

1. **HRIS · Set up.** HR creates the cycle "2027-H1" (C5): self-evaluation deadline, manager deadline, calibration date. Templates assign KPIs by designation (C3/C4), including leadership KPIs whose data source is *LeaderPrism*.

2. **HRIS → LeaderPrism · Sync and request.** The Integration Hub (C16) pushes any employee and department changes (I-A, I-B), then sends an assessment request (I-D) for the cycle's participants with matching dates.

3. **Employees · Acknowledge.** Employees acknowledge their KPIs in the HRIS (C4). Managers approve any personal KPIs employees have proposed.

4. **During the period · HRIS.** Employees update KPI actuals and upload evidence (C6). Managers verify updates and hold check-ins (C10). The dashboard flags KPIs at risk or overdue (C1).

5. **During the period · LeaderPrism.** Employees complete their competency self-rating and managers complete theirs. 360° raters respond through anonymous links. Users reach these forms from the HRIS through single sign-on.

6. **LeaderPrism → HRIS · Results.** On `assessment.closed`, the HRIS fetches O-1, O-2 and O-3. It fills in the actual values of the leadership KPIs and stores the PDF links.

7. **HRIS · Evaluate.** The employee submits a self-evaluation (C7). The manager scores business KPIs, reviews the LeaderPrism leadership results (shown read-only) and submits (C8). The scoring engine calculates the weighted score (C9).

8 **HRIS · Approve and calibrate.** Department head review → HR verification → calibration session (C11). HR may use the 9-box (O-5) in calibration. Adjustments need written reasons.

9 **HRIS · Finalise.** The final rating is approved and locked. The employee acknowledges it or raises an appeal (C11).

10 **HRIS → LeaderPrism · Close the loop.** The final score (I-E) is sent to LeaderPrism and updates the 9-box. Readiness and gaps (O-2, O-4) feed development plans and, where needed, PIPs (C12, C13).

10. Using LeaderPrism results in the KPI scorecard

Leadership results enter the HRIS as ordinary KPIs with **Data Source = "Integrated: LeaderPrism"**. The employee and manager cannot type their actual values; the Integration Hub fills them in. Everything else (weights, scoring, approvals) works exactly as it does for business KPIs.

10.1 Mapping a competency to a KPI

KPI field (C2)	Value for a LeaderPrism competency KPI
KPI name	"Leadership: " + competency name (e.g. Leadership: Strategic Thinking)
Category	Leadership and management (or Communication & teamwork, or Technical competency, mapped from the LeaderPrism domain)
Measurement type	Rating (1–4)
Target value	Required level from the role profile (O-9); if there is no role profile, 3 (Proficient)
Baseline value	Manager level from the previous cycle (if any)
Actual value	Manager level from O-1, **not** the self level
Data source	Integrated: LeaderPrism (read-only actual)
Frequency	Same as the review cycle (normally half-yearly or annual)
Evaluator	Line manager (who already rated it in LeaderPrism)

10.2 Scoring rules

- **Competency KPI achievement** = manager level ÷ target level × 100, capped by the organisation's achievement cap (e.g. 120%).
- **360° KPI achievement** = (others average − 1) ÷ (scaleMax − 1) × 100. This maps the lowest point of the scale to 0%. The self-rating is excluded.
- If LeaderPrism results are **missing** (e.g. the 360° threshold was not met), the KPI is marked *Not assessable*. Its weight is spread over the other KPIs in proportion, or HR decides manually, depending on configuration (C9).

10.3 Example scorecard: Engineering Manager

```
BUSINESS KPIs (HRIS)                                  weight   achieved   weighted
  Sprint commitments delivered on time                   25%       92%       23.0
  Production incidents (lower is better, target ≤ 4)     15%      100%       15.0
  Team attrition (lower is better, target ≤ 10%)         15%       80%       12.0
  Project budget variance                                15%       95%       14.3
LEADERSHIP KPIs (LeaderPrism)
  Competency manager rating (avg vs required)            20%       83%       16.6
  360° feedback, others average                          10%       72%        7.2
                                                         ———                 ———
CALCULATED SCORE                                         100%                88.1
CALIBRATED SCORE (after C11, with reason)                                    86.0  → "Exceeds"
```

The weights are an example. Each organisation configures the split (commonly 70/30 or 60/40 for managers, 80/20 or 90/10 for individual contributors) in its templates.

11. The 9-box feedback loop

LeaderPrism's 9-box has two axes. Today the **performance** axis defaults to the 360° score, which is a weak proxy for business results. After integration:

Axis	Source after integration	Banding (configurable)
Performance	HRIS final calibrated score (I-E)	High ≥ 70 · Medium ≥ 40 · Low < 40, matching LeaderPrism's current thresholds; alternatively, mapped from the HRIS rating bands
Potential	LeaderPrism (learning agility, personality fit, situational judgement)	Unchanged

HR can still override the placement manually, with a note, in LeaderPrism. The HRIS shows the resulting placement (O-5) in talent reviews and calibration.

12. Privacy, anonymity and fair-use rules

- 360° data reaches the HRIS only as grouped averages that meet the threshold. The HRIS must not try to infer rater identity (e.g. it must not show "direct report" averages for a manager with only one direct report).
- Readiness, 9-box, succession and personality data is visible to HR and authorised senior managers only. Personality data is also visible to the employee.
- Personality (O-7) and readiness (O-4) results are never inputs to performance scores, rankings, PIP triggers or pay decisions.
- Every value the HRIS receives keeps its source, assessment ID and retrieval time, so the audit trail can show where a number came from.
- If the HRIS sends a leaver, LeaderPrism deactivates the account and keeps the historical results according to the agreed retention policy.

Part C: HRIS KPI module feature specification

Each chapter below specifies one HRIS module: its purpose, its features with business rules, the data it stores, its statuses and workflow, who can do what, and how it connects to LeaderPrism. The numbering follows the original KPI feature list. Chapter C14 holds the "Reports & Analytics" content (section 15 in the original list), and C16–C17 are new chapters needed for the integration.

Roles used throughout: Employee, **Line Manager**, **Department Head**, **HR Officer**, **HR Administrator**, **Senior Management**, **System Administrator**.

C1. KPI Management Dashboard

MVP

Purpose: one screen that shows the current state of performance across the organisation, filtered automatically by what the viewer is allowed to see.

Dashboard variants

Variant	Scope
HR / Executive	Whole organisation, every department, every cycle
Department Head	Own department and its sub-departments
Line Manager	Direct reports (optionally the whole reporting tree)
Employee	Own KPIs, progress, deadlines and evaluations

Widgets and metrics

Widget	Definition / rule	Priority
Total active KPIs	Count of KPI assignments with status not in (Cancelled, Archived) in the selected cycle	MVP
Employees with KPIs	Distinct employees with ≥ 1 active assignment; also the % of active headcount	MVP
KPIs by status	Not Started, In Progress, On Track, At Risk, Completed, Overdue, Cancelled, Pending approval (count and %)	MVP
Overall company score	Average of employee calculated (or final, once locked) scores, weighted by employee count; shows the cycle's status	MVP
Department overview	Score, completion %, overdue count per department	MVP
Current cycles & deadlines	Open cycles with their next deadline and completion %	MVP
Awaiting approval	KPI assignments, target revisions and evaluations pending the viewer's action (actionable list)	MVP
No recent updates	Employees with no progress update in N days (configurable, default 30) on any active KPI	MVP
Upcoming reviews	Evaluations, check-ins and PIP reviews due in the next 14 days	PHASE 2
Top-performing departments	Top 5 by average score, only for departments with ≥ 5 employees (to protect individuals)	PHASE 2
Trends	Average score and completion % by month, quarter or year; compare against the previous period	PHASE 2

Widget	Definition / rule	Priority
Leadership snapshot	Average LeaderPrism competency achievement and 360° response rate for the cycle (from C16)	PHASE 2
Quick actions	Create KPI, assign from template, start cycle, start evaluation, send reminders	MVP

Visual components

- KPI achievement progress bars (actual vs target, coloured by status)
- Performance scorecards (employee or department card: score, rating band, trend arrow)
- Department comparison bar chart
- Monthly trend line chart
- KPI completion donut
- Rating distribution histogram (with the target distribution overlaid where calibration is used)
- Employee ranking table: **only** for HR/Senior Management, can be turned off per organisation, and hidden until the cycle is finalised

Business rules

- Every widget respects data-access scope (C17). Clicking through a number leads to a list the viewer is allowed to see.
- Filters: cycle, department, designation, manager, KPI category, employment type.
- Aggregates covering fewer than 3 employees are hidden from non-HR viewers.
- Data refreshes on load. Heavy aggregates are cached for up to 15 minutes, and the "last refreshed" time is shown.

C2. KPI Configuration & Master Management

MVP

Purpose: the organisation's library of KPI definitions, maintained by HR administrators. Assignments (C4) always refer to a specific **version** of a definition.

Features

Feature	Details and rules	Priority
Create / edit	Form below. Editing a KPI that is used by an active assignment creates a **new version**; existing assignments stay on their version unless HR migrates them.	MVP
Duplicate	Copies all fields, adds "(copy)" to the name and assigns a new code	MVP
Deactivate	Cannot be newly assigned; existing assignments continue	MVP
Archive	Hidden from lists, kept for history; allowed only when no assignment is in an open cycle	MVP
Unique KPI code	Generated automatically (e.g. `KPI-PRD-0042`, prefix from category) and editable once before first use; unique per organisation	MVP
Min / max acceptable	Threshold (minimum for any credit), target, and stretch (maximum credited). Used by the scoring engine (C9)	MVP
Direction	Higher is better / Lower is better / Within a range / Pass–fail	MVP
Scope level	Individual, Team, Department, Company. Team, department and company KPIs share one actual value, and every member receives the same achievement	MVP
Recurrence	One-time, or recurring (weekly/monthly/quarterly/yearly); recurring KPIs create a measurement period per interval	MVP
Mandatory / optional	Mandatory KPIs in a template cannot be removed by managers	MVP
Measurement method & data source	Free-text method; source = Manual, Imported (Excel), Integrated (system name, e.g. LeaderPrism, Sales CRM, Attendance)	MVP
Excel import / export	Downloadable template; row-by-row validation report before commit; export of filtered list	PHASE 2
Version history	Every saved change: version number, changed fields, old and new values, user, time, reason; compare two versions	MVP
Import from LeaderPrism	Pick competencies from the LeaderPrism framework (O-9) to create leadership KPIs with all mapping fields pre-filled (Section 10.1)	MVP

KPI creation form

Field	Type	Description / validation
KPI code	Text (auto)	Unique per organisation
KPI name *	Text, 150	Unique among active KPIs in the same category
Description *	Rich text	What is measured and why
Category * / Subcategory	Lookup	From C3

Field	Type	Description / validation
Measurement type *	Enum	Percentage, Number, Currency, Rating, Boolean, Duration, Date
Unit	Text / lookup	%, LKR, hours, tickets, … (currency taken from org settings)
Direction *	Enum	Higher better, Lower better, Range, Pass/fail
Baseline value	Number	Starting performance (optional)
Target value *	Number	Default target; can be overridden per assignment
Threshold / Stretch	Number	For higher-better: threshold ≤ target ≤ stretch (mirrored for lower-better)
Default weightage	Percentage	0–100; final weights are validated in the assignment set (C9)
Scope level *	Enum	Individual, Team, Department, Company
Start / End date	Date	Optional; defaults to the cycle dates
Measurement frequency *	Enum	Weekly, Monthly, Quarterly, Half-yearly, Yearly, One-time
Review frequency	Enum	How often the manager verifies progress
Default owner	Employee/team/designation	Responsible party
Default evaluator	Rule	Line manager (default), department head, named user
Data source *	Enum + system	Manual, Imported, Integrated (+ system and external KPI reference)
Evidence required	Boolean	Progress updates need an attachment
Approval required	Boolean	Assignment/target needs manager/HR approval (C11)
Mandatory	Boolean	Cannot be removed from templates
Status	Enum	Draft, Active, Inactive, Archived

C3. KPI Categories & Templates

MVP

Purpose: organise KPIs and give each role a ready-made, consistent KPI set.

Categories

Two-level hierarchy (category → subcategory), configurable per organisation, with a code, colour, default scoring rule (C9) and active flag. Seeded defaults:

Category	Typical source	Category	Typical source
Productivity & efficiency	HRIS / systems	Innovation & continuous improvement	HRIS
Work quality & accuracy	HRIS / systems	Learning & development	HRIS L&D
Task completion & delivery	HRIS / project tools	Compliance & safety	HRIS
Customer satisfaction	Surveys / CRM	Sales & financial performance	CRM / ERP
Communication & teamwork	LeaderPrism + HRIS	Project performance	Project tools
Leadership & management	LeaderPrism	Employee development	HRIS
Technical competency	LeaderPrism + HRIS	Problem-solving	LeaderPrism + HRIS

Template management

Feature	Details and rules	Priority
Template contents	Name, description, applicable designations/departments/grades/employment type, list of KPI versions with weight, target override, mandatory flag, and the business vs leadership weight split	MVP
By job title / designation	Linked to HRIS designations; one default template per designation and employment type	MVP
Department-specific	Templates can be limited to departments; department + designation is more specific than designation alone	MVP
Auto-assignment	When an employee joins, changes designation or a cycle opens, the most specific matching template is suggested or applied (configurable: suggest / auto)	PHASE 2
Clone	Copy a template to another department/designation, then edit	MVP
Bulk apply	Apply to selected employees with a preview of conflicts (already has KPIs, weights ≠ 100%)	MVP
Probation vs permanent	Separate templates by employment type; probation templates connect to probation cycles (C5)	MVP
Manager / team-leader templates	Include leadership KPIs from LeaderPrism by default (e.g. 30% weight)	MVP
Template versioning	Editing a template creates a new version; finalised evaluations keep the version they used; HR can choose to push changes to open, unfinalised assignments	MVP
Weight validation	A template cannot be published unless the weights total 100% (± 0.01)	MVP

C4. KPI Assignment & Goal Setting

MVP

Purpose: give each employee an agreed, weighted set of KPIs and goals for a cycle.

Feature	Details and rules	Priority
Assign to an individual	Pick KPI(s), set target, weight, evaluator, milestones, due date	MVP
Bulk assign	Select employees by filter; preview and confirm; per-employee target overrides allowed	MVP
Department / team KPIs	One shared assignment; members inherit it with their own weight; one actual value updated by the owner	MVP
Auto-assign by designation / template	See C3	PHASE 2
Employee-proposed KPIs	Employee drafts a personal KPI → manager approves, edits or rejects with a comment	PHASE 2
Individual targets & weights	Override template defaults within limits set by HR (e.g. ±20% weight change)	MVP
Milestones & deadlines	Each milestone has a name, due date, % weight of the KPI, and status	MVP
Goal alignment (cascading)	Company goals → department goals → employee KPIs; each assignment can link to a parent goal; alignment tree view	PHASE 2
Transfers	When the HRIS records a transfer, open assignments are flagged; HR/manager choose to close and prorate (C5), carry over, or reassign	PHASE 2
Target revision	Revision request with reason → approval (C11) → new target is effective from a date; the full revision history is kept and shown on the evaluation	MVP
Employee acknowledgement	The employee must acknowledge the KPI set (with optional comment); reminders until done; acknowledgement date is recorded	MVP
Leadership KPIs	When a set includes LeaderPrism KPIs, the employee is included in that cycle's LeaderPrism assessment request (C16)	MVP

Assignment set statuses: Draft → Pending approval → Pending acknowledgement → Active → Closed (or Cancelled).

Rules: weights total 100%. No more than a configurable number of KPIs per employee (e.g. 3–10). An active set can only be changed through a target revision.

C5. Performance Evaluation Cycle Management

MVP

Purpose: define *when* performance is measured and reviewed, and control the review process for each period.

Feature	Details and rules	Priority
Cycle types	Monthly, Quarterly, Half-yearly, Annual, Probation, Project/Special	MVP
Cycle dates	Period start/end; KPI-setting window; self-evaluation open/deadline; manager deadline; department review deadline; calibration date; finalisation date	MVP
Population	All employees, or selected departments, designations, employment types or named employees	MVP
Open / close / extend / cancel	Extensions can apply to the whole cycle, a department or an individual and need a reason. Cancelling requires HR Admin and is logged	MVP
Different cycles per department	E.g. Sales monthly, Engineering half-yearly; an employee may be in more than one cycle type but only one of each type at a time	MVP
Recurring generation	A cycle schedule (e.g. "quarterly, starting Jan") creates the next cycle automatically N days before it starts, in Draft for HR to confirm	PHASE 2
Completion tracking	% of KPIs acknowledged, self-evaluations submitted, manager evaluations submitted and approved; drill-down by department/manager	MVP
Lock	Finalised evaluations become read-only	MVP
Reopen	HR Admin only, with a reason; reopens a single evaluation to a chosen stage; logged and visible on the record	MVP
Proration	For mid-cycle joiners, transfers and role changes: each assignment segment is weighted by the days it was active; rule set per org (e.g. exclude if < 30 days in cycle)	PHASE 2
Probation cycles	Created automatically from the joining date and probation length (HRIS); the outcome (confirm / extend / not confirm) is recorded and sent back to the HRIS employee record	PHASE 2
LeaderPrism link	"Include leadership assessment" option with type(s) (competency, 360°, readiness). When the cycle opens, the HRIS sends the assessment request I-D with the cycle reference and dates	MVP

Cycle statuses: Draft → Scheduled → Goal setting → In progress → Self-evaluation → Manager evaluation → Review & calibration → Finalised → Closed (or Cancelled at any point before Finalised).

C6. KPI Progress Tracking

MVP

Purpose: keep performance visible throughout the period, not only at the end.

Feature	Details and rules	Priority
Progress update	Actual value (or completion of a milestone), as-of date, note; scoped to the measurement period of recurring KPIs	MVP

Feature	Details and rules	Priority
Auto progress %	Calculated with the C9 formula for the KPI's direction; milestone KPIs = sum of completed milestone weights	MVP
Expected vs actual	Expected progress = elapsed time in the period, or the milestone plan; the gap is shown on the progress bar	MVP
Evidence	Attachments (PDF, image, Office, max size per org), links; virus scan; visible to the employee, evaluator and HR	MVP
History	Every update is kept (value, by whom, when, verified or not); trend chart per KPI	MVP
Blocked / delayed	Employee marks a KPI as blocked with a reason category (resources, dependency, scope change, personal, other) and a note	MVP
Manager verification	Manager verifies or rejects an update (with a comment); only verified values count for the final score (configurable)	MVP
Automatic updates	Integrated KPIs receive actuals from connected systems (CRM, attendance, ticketing, LeaderPrism) through C16; these are marked "system" and cannot be edited	PHASE 2
Last updated	Shown on every KPI card; triggers the "no recent updates" dashboard alert	MVP

Status rules (calculated automatically, can be overridden manually with a reason)

Status	Rule
Not Started	No progress update yet and the period has started
In Progress	At least one update; not enough elapsed time to judge (e.g. < 20% of the period)
On Track	Actual progress ≥ expected progress − tolerance (default 10 points)
At Risk	Actual progress is below expected by more than the tolerance, or the KPI is marked blocked
Completed	Target reached (or all milestones done) and verified
Overdue	End date passed and not Completed
Cancelled	Withdrawn through an approved revision

C7. Employee Self-Evaluation

MVP

Purpose: let the employee give their own account of the period before the manager evaluates.

Feature	Details and rules	Priority
View KPIs & progress	All assigned KPIs, targets, latest verified actuals, calculated achievement	MVP
Self-score per KPI	Rating on the org's scale (e.g. 1–5) plus comment; required for manual KPIs, optional for system-measured ones	MVP
Unmet targets	A reason is required for any KPI below threshold	MVP
Narrative sections	Key achievements, challenges & blockers, skills to improve, support needed	MVP
Evidence	Attach new files or link existing progress evidence	MVP
Leadership self-assessment	For employees with LeaderPrism KPIs, a "Complete leadership self-assessment" button opens LeaderPrism through single sign-on; completion status is shown here. The competency self-rating is done **in LeaderPrism**, not duplicated in the HRIS	MVP
Request feedback	Ask the manager or a colleague for feedback on a KPI (goes to C10)	PHASE 2
Next-period development goals	Proposed goals, carried into C13 when approved	PHASE 2
Draft & submit	Autosave as draft; submit before the deadline; after the deadline, submission requires an extension	MVP
History	View past finalised evaluations, including LeaderPrism reports	MVP
Acknowledge final review	See C11	MVP

Rule: the self-rating is always labelled "Self" and kept separate from the official manager rating. It never replaces the manager rating in the calculation.

C8. Manager Performance Evaluation

MVP

Purpose: the official evaluation by the line manager.

Feature	Details and rules	Priority
Team view	List of reports with evaluation stage, self-evaluation status, calculated score, overdue items	MVP
Side-by-side review	For each KPI: target, actual, calculated achievement, self-score and comment, evidence, revision history	MVP
Manager score per KPI	Score plus comment; for system-measured KPIs the calculated score is shown and a manual adjustment needs a reason	MVP
Approve / reject progress	Pending progress updates can be verified from the evaluation screen	MVP
Behavioural competencies	LeaderPrism The manager rates competencies **in LeaderPrism** (link through single sign-on). The results (O-1, O-3) are shown read-only in the HRIS evaluation: manager level vs required, self vs manager gap, and the 360° summary	MVP

Feature	Details and rules	Priority
Strengths / improvement areas	Structured lists (tag + comment), with suggestions from LeaderPrism gaps (O-2) available to pick	MVP
Development recommendations	Free text and suggested actions; can create development-plan items (C13)	MVP
Performance history	Past ratings, trend and previous recommendations, shown before scoring	MVP
Request revision / clarification	Return the self-evaluation to the employee with comments	MVP
1:1 review meeting	Schedule (calendar invite), record notes and agreed actions, mark as held	PHASE 2
Overall recommendation	Proposed rating band, plus optional recommendations: promotion, increment, training, PIP	MVP
Submit to next level	Sends the evaluation to the approval chain (C11)	MVP

C9. KPI Scoring & Rating Engine

MVP

Purpose: a configurable engine that turns actuals and ratings into consistent scores across employees and departments.

Achievement formulas (per KPI)

Direction / type	Formula
Higher is better	achievement = (actual − baseline) ÷ (target − baseline) × 100, or simply actual ÷ target × 100 when no baseline is set. 0 below the threshold; capped at stretch / org cap (e.g. 120%)
Lower is better	achievement = target ÷ actual × 100 (if actual = 0 → maximum cap), or the baseline form (baseline − actual) ÷ (baseline − target) × 100; capped
Within range	100 inside [min, max], decreasing linearly to 0 at a configured tolerance outside
Pass / fail	100 or 0
Rating scale	(rating − scale min) ÷ (scale max − scale min) × 100, or level ÷ target level × 100 for LeaderPrism competencies
Milestones	Sum of the weights of completed milestones

Score layers (stored separately, never overwritten)

1. **Calculated score**: from verified actuals by formula
2. **Self score**: employee's own rating
3. **Manager score**: official rating (defaults to the calculated score for system-measured KPIs)
4. **Adjusted score**: authorised adjustment with a mandatory reason
5. **Calibrated / final score**: after the calibration session (C11)

Rules

Rule	Details	Priority
Weighted final score	Σ (KPI score × weight). Optional section weights (e.g. Business 70% / Leadership 30%) applied first	MVP
Weight validation	Weights total 100% at each level; blocking error otherwise	MVP
Rules by category	Each category can define a default formula, cap and scale	MVP
Rating bands	Configurable, e.g. ≥ 90 Outstanding, ≥ 75 Exceeds, ≥ 60 Meets, ≥ 45 Partially meets, else Below	MVP
Achievement caps	Per KPI and per organisation (e.g. 120% max credit) so one KPI can't hide failures elsewhere	MVP
Safe calculation	Division by zero, missing actuals and invalid ranges give "Not assessable" with a reason, never 0 or ∞	MVP
Missing data policy	If a KPI is not assessable, its weight is redistributed proportionally, or HR decides (org setting)	MVP
Team / department scores	Average of member final scores (or the shared KPI's achievement); minimum group size for display	MVP
Proration	Segments weighted by active days (C5)	PHASE 2

Rule	Details	Priority
Recalculation	Happens automatically on any change until the evaluation is locked; the formula and settings version is stored with each result	MVP
Calculation trace	"How was this calculated?" view: inputs, formula, weights, cap applied	PHASE 2

C10. Feedback & Continuous Performance Monitoring

PHASE 2

Purpose: ongoing conversations between formal reviews.

Feature	Details and rules	Priority
Continuous feedback	Manager → employee notes linked to a KPI or general; visibility: private to the manager, shared with the employee, or shared with HR	PHASE 2
Feedback requests	Employee asks the manager or peers for feedback on a KPI or a piece of work	PHASE 2
Check-ins / 1:1s	Recurring schedule (e.g. monthly); agenda template; notes; agreed actions with owner and due date; carried into the next check-in	PHASE 2
Recognition	Appreciation messages, optionally public on a recognition wall; tagged to values/KPIs	PHASE 2
Achievements log	Positive achievements recorded during the period, available in self- and manager evaluations	PHASE 2
Peer feedback	Lightweight, named peer feedback in the HRIS	PHASE 2
180° / 360° & anonymous feedback	LeaderPrism **Delivered by LeaderPrism UC1.** The HRIS triggers it through the cycle (C5) and shows the results (O-3). Do not build a second 360° engine	MVP
Follow-up actions	Actions from feedback and check-ins with deadlines and reminders; progress status	PHASE 2
Coaching recommendations	Suggested coaching topics from LeaderPrism gaps (O-2) and the AI assistant (C15)	PHASE 3

C11. KPI Approval & Review Workflow

MVP

Purpose: a configurable workflow engine that controls KPI setup and evaluation finalisation.

Workflow types

Workflow	Default chain (configurable)
KPI assignment approval	Manager → (optional) Department Head → Employee acknowledgement
Target revision	Manager → HR (if the change is above a % threshold)
Employee-proposed KPI	Manager
Evaluation finalisation	Self-evaluation → Manager evaluation → Department Head review → HR verification → Calibration (optional) → Final approval → Employee acknowledgement
Appeal	Employee → HR → Appeal panel / senior manager → Decision
Cycle reopen / extension	HR Administrator

Features

Feature	Details and rules	Priority
Configurable steps	Per workflow type and per department: ordered steps; approver resolved by rule (line manager, manager's manager, department head, HR role, named user); parallel or sequential	MVP
Actions	Approve, Reject (comment required → returns to the previous step for resubmission), Request changes, Delegate	MVP
Delegation	Approvers set an out-of-office delegate for a date range	PHASE 2
Escalation	Step not acted on within N days → reminder → escalate to the next level / HR; SLA shown on the dashboard	PHASE 2
Calibration	Session per department/level: grid of employees with calculated and proposed ratings, the distribution vs a guideline curve, the 9-box from LeaderPrism (O-5); adjustments need a reason; produces the final score layer	PHASE 2
Employee acknowledgement	Employee confirms they have seen the final review (acknowledging is not the same as agreeing); comment allowed; deadline and reminders	MVP
Disputes / appeals	Raised within N days of finalisation with grounds and evidence; status tracking; the outcome (upheld / adjusted) creates a new final score version	PHASE 2
Full history	Timeline per item: every step, actor, action, comment, timestamp; exportable	MVP

C12. Performance Improvement Plans (PIP)

PHASE 2

Purpose: a structured, supportive process for employees not meeting agreed expectations. It is **not** an automatic disciplinary step.

Feature	Details and rules
Create PIP	Started by a manager or HR (never automatically). The system may *suggest* a PIP after repeated low ratings, but a person must decide. Requires HR approval to start
Areas & goals	Each improvement area has measurable goals with target, measure and deadline; can link to existing KPIs or LeaderPrism competency gaps (O-2)
Duration	Start/end date (typically 30/60/90 days); extensions need approval and a reason
Support	Responsible manager and optional mentor; coaching sessions; assigned training (C13)
Follow-ups	Scheduled review meetings with notes, progress rating per goal, evidence
Employee voice	The employee can comment at each review and at closure; acknowledges the plan at start
Closure	Outcome: Successfully completed, Extended, Not successful (escalated to HR process), Cancelled. Approval by HR
Reports	PIP progress report (PDF); list of active PIPs for HR
Link to evaluations	The outcome is shown in the next evaluation; PIP goals can become KPIs
Confidentiality	Visible only to the employee, manager, mentor and HR

Statuses: Draft → Pending HR approval → Active → Under review → Extended → Closed (with outcome) / Cancelled.

C13. Employee Development & Career Growth

PHASE 2

Purpose: turn evaluation results into growth. This is where LeaderPrism adds the most value.

Feature	Details and rules	Source
Skill gap identification	Combined view: LeaderPrism competency gaps (O-2), low-scoring KPI categories, skills to improve from the self-evaluation	LP HRIS
Individual Development Plan (IDP)	Goals (with type: skill, knowledge, experience, certification, leadership), actions, target date, support, status; agreed by employee and manager; reviewed each cycle	HRIS
Training recommendations	Rules map gaps to internal courses (competency → course catalogue); the AI assistant (C15) can suggest more	HRIS
Learning & certification goals	Assigned from the L&D catalogue; due dates; completion recorded from the L&D module	HRIS L&D
Career objectives	Employee's aspired roles; mobility preferences; manager's view	HRIS
Leadership development	Progress across repeat LeaderPrism assessments: competency level over time, 360° trend	LP
Promotion readiness	Readiness rating against the target role (O-4), shown with the latest performance rating	LP
Succession link	Shows if the employee is a nominated successor (O-6); IDP goals can target the key role's requirements	LP
Improvement over reviews	Trend of final scores and competency levels across cycles	LP HRIS

C14. KPI Reports & Analytics

MVP

Standard reports

Audience	Report	Priority
Employee	Individual KPI achievement (target, actual, achievement, score per KPI)	MVP
	Evaluation history across cycles	MVP
	Self vs manager evaluation (KPIs from HRIS; competencies from LeaderPrism O-1)	MVP
	Improvement trend	PHASE 2
	Strengths & improvement areas (HRIS evaluation + LeaderPrism gaps)	PHASE 2
Team / Department	Department KPI achievement summary	MVP
	Team performance trend	PHASE 2
	KPI distribution by category	MVP
	Target vs actual by department	MVP
	Evaluation completion & overdue	MVP

Audience	Report	Priority
HR / Management	Organisation-wide performance summary	MVP
	Quarterly and annual performance reports	MVP
	Historical comparison (any two cycles)	PHASE 2
	Training & development needs (aggregated gaps incl. LeaderPrism)	PHASE 2
	KPI compliance & approval status (acknowledgements, pending approvals, SLA)	MVP
	Review completion statistics	MVP
	Rating distribution & calibration (before vs after calibration)	PHASE 2

Reporting tools

- Filters: employee, department, designation, manager, period/cycle, category, employment type MVP
- Export to **Excel (.xlsx)** and **PDF** for every report MVP
- Period comparison (two cycles side by side) PHASE 2
- Custom report builder: choose fields, groupings and charts PHASE 3
- Saved report configurations (personal or shared with a role) PHASE 2
- Scheduled reports: daily/weekly/monthly, emailed as attachments to permitted users PHASE 3
- Permission-aware: a report only ever includes employees in the viewer's data scope; exports are logged MVP
- Leadership reports: LeaderPrism PDFs (O-8) are linked, not regenerated MVP

C15. AI-Powered KPI Assistant

PHASE 3

Purpose: AI help across the whole performance lifecycle, built into the HRIS AI agent. LeaderPrism provides data and has no AI of its own.

AI feature	What it does	Data used
KPI generator	Suggests KPIs for a designation and its responsibilities	Job description, KPI library, templates
SMART goal assistant	Rewrites a vague goal into a Specific, Measurable, Achievable, Relevant, Time-bound goal	Draft goal, cycle dates
KPI recommendation	Suggests targets and measurement methods	Historical actuals of similar roles
Performance summary	Writes a summary from actual results and approved evidence	KPI results, verified evidence, O-1, O-3
Performance insights	Explains trends, improvements and risks	History, progress data
Feedback assistant	Helps managers write constructive, specific, bias-checked comments	Draft comment, KPI results
Self-evaluation assistant	Organises the employee's evidence into a self-review	Own KPIs, evidence, achievements log
Skill gap analysis	Summarises development areas	LP O-2, O-3; KPI categories
Development plan	Proposes IDP goals and training	LP O-2, O-4, (O-7 for coaching tone only); course catalogue
Report generator	Builds employee, team and department reports from a prompt	Report data within the user's scope
Conversational search	Answers questions like "Which KPIs are behind schedule?"	Data within the user's scope
Anomaly detection	Flags unusual score jumps, missing updates, inconsistent self vs manager ratings, rating inflation by one manager	Scores, updates, distributions
Goal alignment	Suggests links from employee KPIs to department and company goals	Goal tree
Meeting summary	Summarises check-in notes into decisions and actions	C10 notes

Mandatory controls

- **Permission-scoped retrieval:** the AI queries data through the same access layer as the UI and runs as the current user. It can never see more than the user can.
- **Human in the loop:** AI output is a draft. It is editable and labelled "AI-generated" until a person accepts it. It is never applied automatically to ratings, PIPs or pay.
- **Excluded inputs:** personality (O-7) and readiness (O-4) data are not used for rating or ranking suggestions. Protected characteristics are never used.
- **Logging:** prompts, data sources used, and the accepted/edited output are logged for audit.
- **Anonymity:** the AI receives the same grouped 360° data as the HRIS, never individual responses.

C16. Integration Hub (LeaderPrism connector) MVP

Purpose: the HRIS component that talks to LeaderPrism (and later to other systems such as CRM and attendance).

Feature	Details and rules	Priority
Connection settings	Per organisation: LeaderPrism base URL, client credentials (stored encrypted), webhook secret, connection test	MVP
Master data push	Employees, departments, designations sent on change (event-driven) plus a nightly full reconciliation	MVP
Assessment orchestration	Sends I-D when a cycle with leadership KPIs opens; adds late joiners; stores the LeaderPrism assessment ID against the cycle	MVP
Webhook receiver	Verifies the signature; queues processing; idempotent (an event processed twice has no extra effect)	MVP
Results import	Fetches O-1/O-2/O-3 on `assessment.closed` / `results.ready`; maps them to leadership KPI actuals; keeps the raw payload with source and timestamp	MVP
Score push	Sends final scores (I-E) after finalisation and after any appeal change	PHASE 2
Single sign-on hand-off	"Open in LeaderPrism" deep links for self-assessment, manager rating, reports	MVP
Monitoring	Sync log (success/failure, records affected), retry queue, alerts to the System Administrator, mapping-error list (e.g. unknown employee)	MVP
Other connectors	Same framework for CRM, attendance, ticketing, ERP to fill integrated KPI actuals (C6)	PHASE 3

C17. Cross-cutting: roles, notifications, audit, settings

MVP

Roles & permissions matrix

Capability	Employee	Line Mgr	Dept Head	HR Officer	HR Admin	Sr Mgmt
Manage KPI master, categories, templates	–	–	Propose	View	✓	View
Create / manage cycles	–	–	–	✓	✓	–
Assign KPIs	Propose	Reports	Department	✓	✓	–
Update progress	Own	Reports	–	–	–	–
Verify progress	–	Reports	Department	–	–	–
Self-evaluation	Own	Own	Own	Own	Own	Own
Manager evaluation	–	Reports	Department	–	–	–
Approve / calibrate	–	Step	Step	✓	✓	✓
Reopen evaluation	–	–	–	–	✓	–
View LeaderPrism competency / 360°	Own	Reports	Department	✓	✓	✓
View readiness / 9-box / succession	–	–	Config.	✓	✓	✓
View personality	Own	–	–	✓	✓	–
Rankings	–	–	Config.	✓	✓	✓
Integration settings	System Administrator only					

"Reports" = the user's direct reports (optionally their whole reporting tree). "Config." = enabled per organisation.

Notifications (email + in-app; push optional)

- KPIs assigned / awaiting acknowledgement; proposed KPI approved or rejected
- Progress update due; no update in N days; KPI became At Risk or Overdue
- Cycle opened; self-evaluation and manager deadlines (7, 3 and 1 day before); deadline missed
- Approval required; approval overdue / escalated; item rejected with a comment
- Leadership assessment available in LeaderPrism; results imported
- Final review ready for acknowledgement; appeal decision
- Check-in reminders; PIP review due; development goal due
- Users can choose a digest instead of individual emails; mandatory notices cannot be turned off

Audit trail

The audit trail records: create, update, delete and status change on KPIs, templates, assignments, targets, progress, scores and evaluations; approvals; reopen and extension; score adjustments and calibration changes; exports; AI suggestions accepted; and integration imports and pushes. Each entry stores who, when, what (old → new), why (reason) and source (UI, API, integration). Entries cannot be changed, and only HR Admin can search and export them.

Organisation settings

- Rating scale and bands; achievement cap; missing-data policy; status tolerance
- Default business vs leadership weight split per employee group

- Minimum group size for aggregates; ranking visibility
- Evidence file types and size; data retention period
- Working calendar / holidays (for deadlines and proration)
- Languages: English, Sinhala, Tamil (matching LeaderPrism)

13. Data model summary (HRIS)

Entity	Key fields
KpiCategory	id, orgId, parentId, code, name, defaultScoringRuleId, isActive
KpiDefinition	id, orgId, code, currentVersionId, status
KpiDefinitionVersion	id, kpiId, version, name, description, categoryId, measurementType, unit, direction, baseline, target, threshold, stretch, defaultWeight, scopeLevel, frequency, dataSource, externalSystem, externalRef, evidenceRequired, approvalRequired, mandatory, createdBy, createdAt, changeReason
KpiTemplate / TemplateVersion / TemplateItem	applicability (designations, departments, employmentType), sectionWeights; items: kpiVersionId, weight, targetOverride, mandatory
Goal	id, orgId, level (company/department/individual), parentGoalId, ownerId, title, period
Cycle	id, orgId, type, name, periodStart/End, deadlines, population rule, status, includeLeadership, leaderPrismAssessmentId
AssignmentSet	id, cycleId, employeeId, status, acknowledgedAt, templateVersionId
KpiAssignment	id, setId, kpiVersionId, scopeLevel, sharedAssignmentId, target, weight, evaluatorId, goalId, startDate, endDate, status
Milestone	id, assignmentId, name, dueDate, weight, status
TargetRevision	id, assignmentId, oldTarget, newTarget, effectiveFrom, reason, workflowInstanceId
ProgressUpdate	id, assignmentId, periodKey, actualValue, asOf, note, source (manual/import/system), verifiedBy, verifiedAt, blockedReason
Evidence	id, ownerType, ownerId, fileUrl, fileName, uploadedBy
Evaluation	id, cycleId, employeeId, stage, selfSubmittedAt, managerSubmittedAt, finalisedAt, lockedAt, acknowledgedAt
EvaluationKpiScore	id, evaluationId, assignmentId, calculated, self, manager, adjusted, final, comments, adjustmentReason, formulaVersion
EvaluationResult	evaluationId, calculatedScore, finalScore, ratingBand, sectionScores, calibrationNote
LeadershipResult	id, evaluationId, employeeId, source='LeaderPrism', assessmentRef, payload (O-1/O-2/O-3), importedAt
WorkflowDefinition / Instance / Step	type, steps, approver rules, SLA; instance: subject, current step, history
Appeal	id, evaluationId, grounds, status, decision, decidedBy
FeedbackNote, CheckIn, CheckInAction, Recognition	author, subject, visibility, linked KPI, due dates

Entity	Key fields
Pip, PipGoal, PipReview	employee, manager, mentor, dates, goals, reviews, outcome
DevelopmentPlan, DevelopmentGoal	employee, cycle, goals, linked gap/competency, course, status
IntegrationConnection, SyncLog, WebhookEvent	credentials (encrypted), status, payload, processedAt, error
AuditLog	orgId, actorId, action, entity, entityId, before, after, reason, source, at

All entities carry an `organisationId`, and every query filters by it.

14. Implementation roadmap

Phase	HRIS	LeaderPrism	Outcome
Phase 0 Foundations	Roles & data scopes, audit trail, notifications framework, org settings	P-1 system auth, P-2 external IDs, P-3 sync API	Systems can identify the same employees
Phase 1 (MVP) First review cycle	C2 master, C3 categories & templates, C4 assignment, C5 cycles, C6 progress, C7 self-eval, C8 manager eval, C9 scoring, C11 basic workflow, C1 dashboard, C14 core reports + Excel/PDF, C16 connector	P-4 assessment API, P-5 results API, P-6 webhooks, P-7 SSO	A full half-yearly cycle with business + leadership KPIs, end to end
Phase 2 Talent & growth	C10 continuous feedback, C11 calibration/escalation/appeals, C12 PIP, C13 development, proration, auto-assignment, goal cascading, C14 trends & comparisons	P-8 inbound score → 9-box, P-9 audit log, P-10 scheduler; O-4/O-5/O-6 exposed	Calibrated ratings; 9-box shows real performance; IDPs from gaps
Phase 3 Intelligence	C15 AI assistant, custom report builder, scheduled reports, other system connectors	O-7 for coaching context	AI-assisted reviews and insights

15. Open questions and assumptions

#	Question	Working assumption
1	The original feature list has no section 14. Was a section left out?	Assumed none. Reports are covered in C14
2	Is the HRIS the source of truth for employees and departments?	Yes. LeaderPrism fields become read-only for HRIS-linked organisations
3	What is the business vs leadership weight split?	Configurable per template; suggested 70/30 for managers, 90/10 for staff
4	Does one HRIS serve one company or many client companies?	Many: one LeaderPrism organisation per HRIS tenant, with separate credentials
5	Which rating scale does the HRIS use (1–5, 1–4, %)?	1–5 with bands as in C9; LeaderPrism values are normalised to %
6	Will LeaderPrism forms be embedded or opened in a new tab?	New tab with SSO for MVP; embedding later
7	Data retention for leavers' assessment results?	Keep for 7 years, then anonymise (to be confirmed with legal)

Appendix: Glossary

KPI	Key Performance Indicator: a measurable target that an employee, team or department is evaluated against
Assignment set	The weighted group of KPIs given to one employee for one cycle

Achievement	How far an actual value has reached its target, in %, after direction, threshold and cap are applied
Calibration	A review meeting where managers and HR compare proposed ratings across teams to make them consistent
Competency	A behaviour or skill defined in LeaderPrism's framework, rated on four levels
360° feedback	Ratings from several perspectives (self, supervisor, peers, direct reports, stakeholders), reported anonymously as group averages
9-box	A 3×3 grid placing employees by performance (x) and potential (y) for talent and succession decisions
Readiness	LeaderPrism's estimate of how soon an employee could step into a target role
IDP	Individual Development Plan
PIP	Performance Improvement Plan: a supportive, time-bound plan for addressing performance gaps
SSO	Single sign-on: one login for both systems
Webhook	An automatic message one system sends to another when an event happens
